REASONS FOR ALLOWANCE

The following is an Examiner's Statement of Reasons for Allowance:

Claims 1-7 and 9-10 are allowed because none of the prior art references of record teaches a system comprising a transport mechanism that is configured to move the print head between a position over a wafer and another position over a sensor module, the sensor module being configured to receive droplets from nozzles of the print head to allow the nozzles to be calibrated to dispense a substantially same amount of material in the combination as claimed.

Claims 13-15 are allowed because none of the prior art references of record teaches a system comprising circuit means for generating a signal indicative of a characteristic of a droplet and a transport mechanism that is configured to move the print head between a position over a wafer and another position over a sensor means in the combination as claimed.

Claims 16, 18-20 and 27 are allowed because none of the prior art references of record teaches a method of sensing a droplet characteristic comprising steps of generating a first output signal indicative of a first amount of a droplet; comparing the first amount of the first droplet to a known good amount and calibrating the first nozzle of the print head based on the comparison of the first amount to the known good amount in the combination as claimed.

Claims 21-23 are allowed because none of the prior art references of record teaches a system comprising a control system that is configured to generate a tuning signal based on an output signal, the tuning signal being provided to a mechanism that dispensed a material to perform deposition on a wafer in the combination as claimed.
